Electric driven Actuators for 20 and 35 kHz Ultrasonic Weldings

Conceived for easy adaptation in customer specific welding systems with with userfriendly interfaces.

Compact design and small outline dimensions for easy installation in welding machines and special machinery.

Attachment at the machine frame either from front or from rear side; possibility of centering and angular orientation.

"Plug and play" concept with cable outlet (RF-power, signals and motor) on the back / lateral sides of the actuator.

Precision guides and proven drive components guarantee repeatable weldings

Easy set-up procedure and production monitoring with a 5.7" touch screen. Intuitive weld process management with password protection and production counters.

Coordinated accessories and additional software available.

 ${\bf Ecologically\ sustainable\ through\ lower\ energy\ requirement\ for\ operation.}$

your next ultrasonic welding system!

ESPA 20-100 Frequency:

Stroke max.: Force max:

20kHz 100mm 1800N

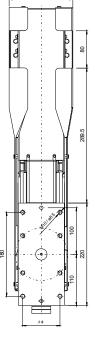

Velocity max: Travel measurement: Motor Encoder Weight:

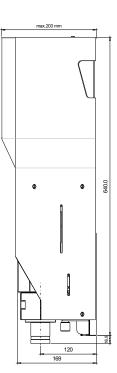

100mm/sec appr. 17.0 kg

Options:

- High resolution linear encoder - Force Cell for US-trigger and

welding force

ESPA 35-100 Frequency: Stroke max.: Force max:

35kHz 100mm

Velocity max:

700N 130mm/sec Travel measurement: Motor Encoder

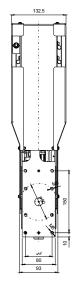

Weight:

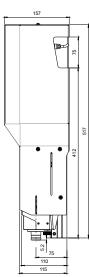

appr. 10.0 kg

Options:

High resolution linear encoderForce Cell for US-trigger and

welding force

US-Generator / Controller: UCS 3520

400/600/900W 35kHz:

20kHZ: 1000/1500/2000/3000 W

Weight:

19.0 kg 292x495x312(H) mm Dimensions:

Options:

PLC Software according to customer specific application.
